Dragon Air: the Operations briefings, for review

20 October 2026. Every briefing in the game, screen by screen, with Bertie's notes. It is for ChatGPT, to improve the story each briefing tells, and for Claude Design, to rework how they look.

Each briefing is a short animated scene that plays at one moment in the game (given under each title), in the game's dark navy look. A pupil presses Next to move on and, at a few points, makes a choice. The pictures here were played on their own with each briefing's built-in example figures; in the game they use the pupil's own airline. "The words on screen" is the full text the pupil reads, in order.

NOTES FOR EVERY BRIEFING

- The words are in a bar along the bottom of the screen, where they are easy to miss because the eye is on the picture. Bertie wants the text moved up near the middle of each scene, the graphics lowered a little to make room, and the text centred (see Cash, tank, profit).
- More demand than seats is to be cut as a briefing; its point (only buy a bigger plane when there is demand to nearly fill it) moves to the end of What a fare does.
- Snacks on board, planned in the workbook, has been dropped.

THE BRIEFINGS

1. What a fare does · Launch Day, in the Studio before the first fare is set
2. Cash, tank, profit · Launch Day, the first Fuel desk visit
3. Customers have a choice · Thursday of week 1, with Red Kite's undercut card
4. More demand than seats · The week-1 review
5. Two planes, one route · Week 2, the first aircraft comparison in the shop
6. How long will it take? · The first time the Flight times page opens
7. Weekdays and weekends · The week-2 review
8. Can you afford to run it? · Week 2, the Fuel desk, straight after Cash, tank, profit
9. One big Saturday · Day 22, when the All Blacks Saturday is announced
10. A year of demand · The chapter 1 review
11. Renting a plane · 6 January 2031, the 787 to lease
12. Profit is not cash · Chapter 3, the first overdrawn month or the 787 purchase

What a fare does

In the game: Launch Day, in the Studio before the first fare is set · 14 screens

BERTIE'S NOTES, AS WRITTEN

No notes on this one.

WHAT BERTIE IS ASKING FOR

Bertie (in chat): the fare slider didn't work when he tried it. In tests it drags with a mouse at every screen size; to be safe the fares under it can now be pressed too, and the slider has a bigger grab area. From More demand than seats: add a closing beat here about bigger planes: you will have to decide, at different times, whether a bigger plane is worth it. It will be in the end, but only when there is enough demand to nearly fill it; until then its extra cost can outweigh the extra profit.

THE WORDS ON SCREEN, IN ORDER

1. Passengers buy tickets. Each ticket costs the fare.
2. Each passenger pays the fare. All the ticket money together is your revenue. *(After selling three tickets)*
3. You choose the fare. Drag it and watch how many people want to fly.
4. 80 people want to fly at £70. You have two planes.
5. 80 want to fly, but you only have 38 seats. The other 42 can't buy a ticket, so they pay nothing. *(After Board the planes)*
6. Your challenge: fill the seats and make the most money.
7. One plane is full at £100. The other has one empty seat at £110. Which makes more ticket money? Let's work it out.
8. Each ticket sold adds one fare to the ticket money.
9. £100 plane: 19 passengers × £100 = £1,900.
10. £110 plane: 18 passengers × £110 = £1,980.
11. The £110 plane makes £80 more.
12. A full plane isn't always the most money. Compare the ticket money.
13. Find the fare that fills your seats and makes the most ticket money.

Screen 1 Passengers buy tickets. Each ticket costs the fare.

Screen 2 Each passenger pays the fare. All the ticket money together is your revenue.

Screen 3 You choose the fare. Drag it and watch how many people want to fly.

Screen 4 You choose the fare. Drag it and watch how many people want to fly.

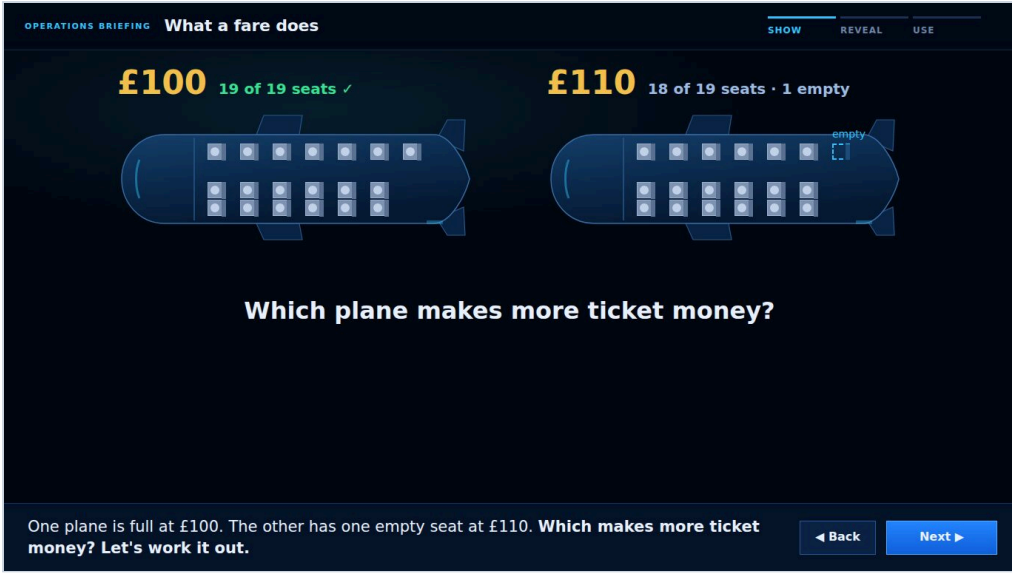

Screen 5 80 people want to fly at £70. You have two planes.

Screen 6 80 want to fly, but you only have 38 seats. The other 42 can't buy a ticket, so they pay nothing.

Screen 7 Your challenge: fill the seats and make the most money.

Screen 8 One plane is full at £100. The other has one empty seat at £110. Which makes more ticket money? Let's work it out.

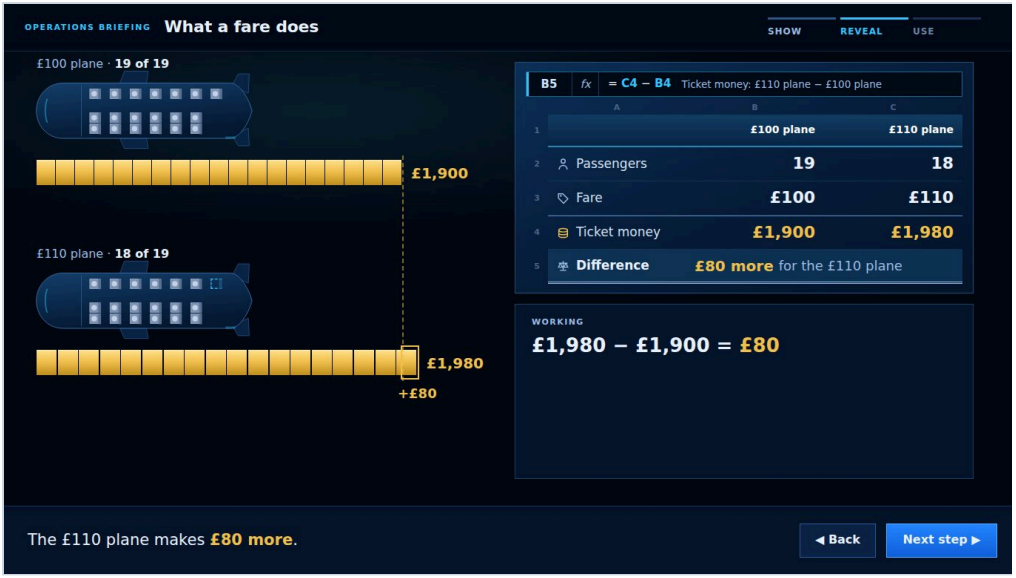

Screen 9 Each ticket sold adds one fare to the ticket money.

Screen 10 £100 plane: 19 passengers × £100 = £1,900.

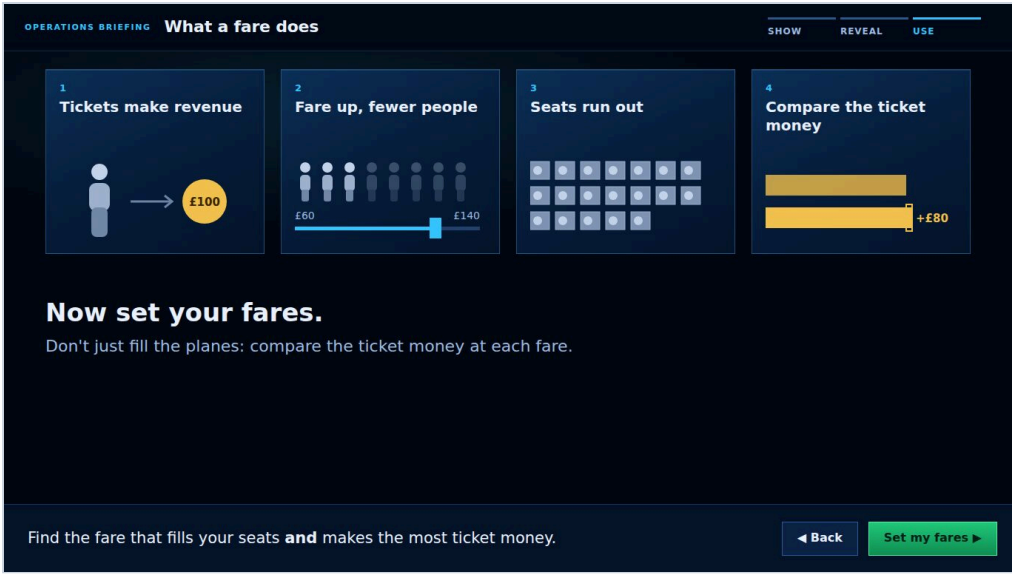

Screen 11 £110 plane: 18 passengers × £110 = £1,980.

Screen 12 The £110 plane makes £80 more.

Screen 13 A full plane isn't always the most money. Compare the ticket money.

End Find the fare that fills your seats and makes the most ticket money.

BERTIE'S NOTES, AS WRITTEN

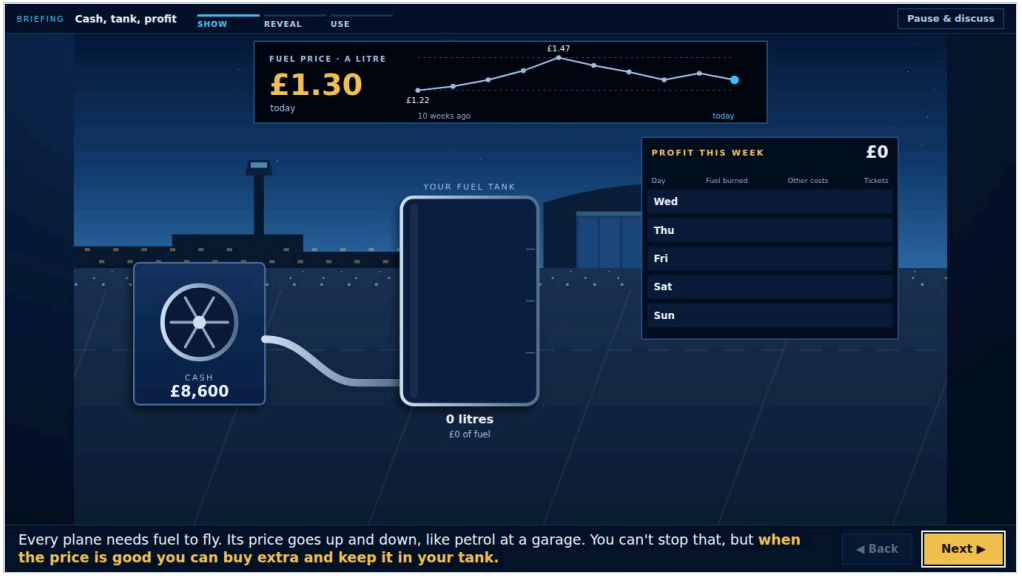

I think for all the briefings, the text being in the bottom. Doesn't feel very obvious. So could you lower the graphics? And Oregon the visuals and maybe put it just under the £1.30 banner. I think it will be more easy to read there. Because your eye is looking at the diagrams and not at the bottom banner. Apply this logic to all the briefings. Now it will vary depending on the briefing, but find somewhere more central to have the text and also make the text more centralized.

WHAT BERTIE IS ASKING FOR

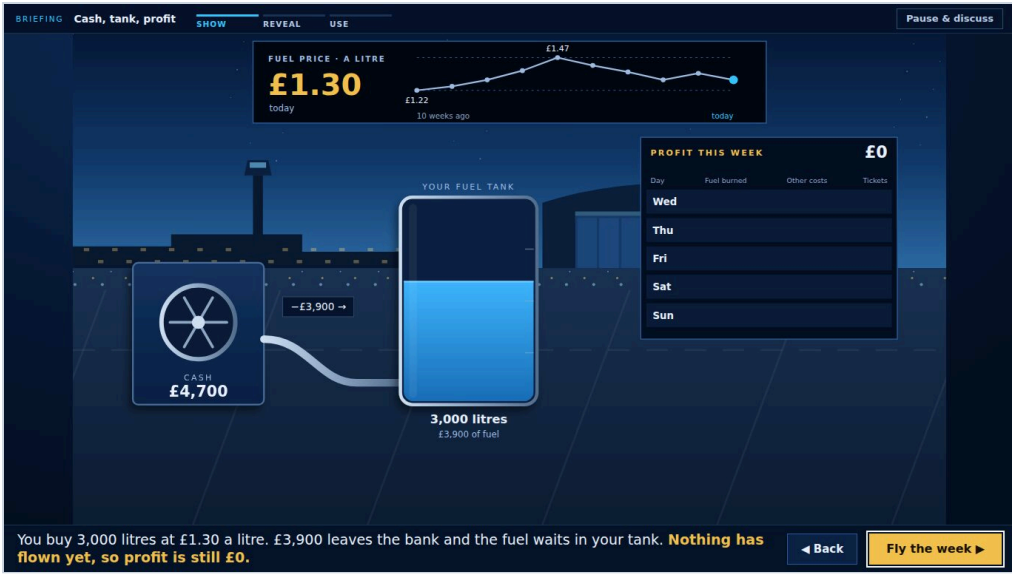

Applies to every briefing: the words sit in the bar along the bottom, but the eye is on the picture, so they are easy to miss. Move the text up to where the eye already is, near the middle of the scene (here, just under the £1.30 price banner), lower the graphics a little to make room, and centre the text. Where the text goes will differ from briefing to briefing; find the most central place in each.

THE WORDS ON SCREEN, IN ORDER

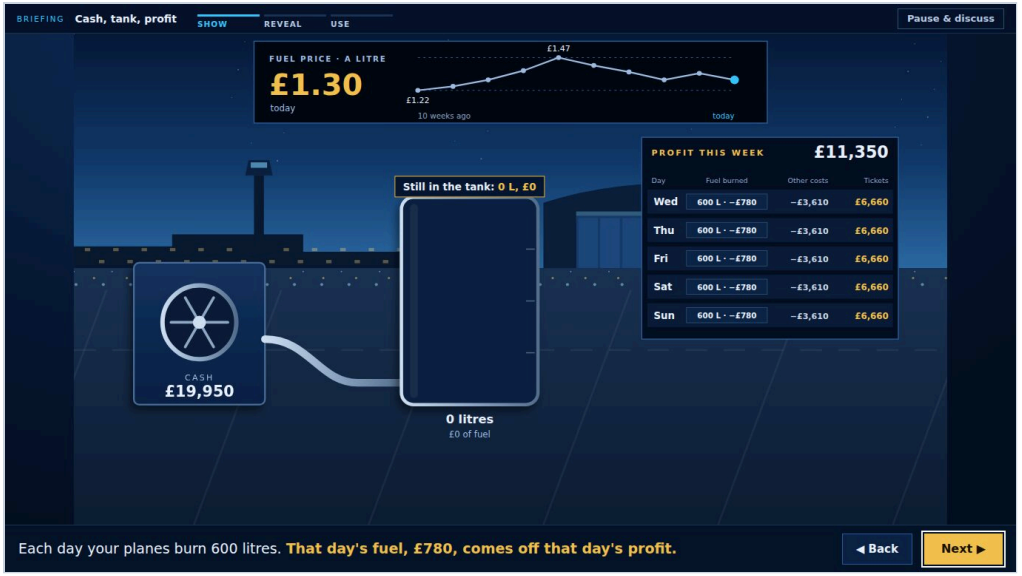

1. Every plane needs fuel to fly. Its price goes up and down, like petrol at a garage. You can't stop that, but when the price is good you can buy extra and keep it in your tank.
2. You buy 3,000 litres at £1.30 a litre. £3,900 leaves the bank and the fuel waits in your tank. Nothing has flown yet, so profit is still £0.
3. Each day your planes burn 600 litres. That day's fuel, £780, comes off that day's profit.
4. The fuel's cost doesn't come off all at once. Each day pays for the fuel it burns.

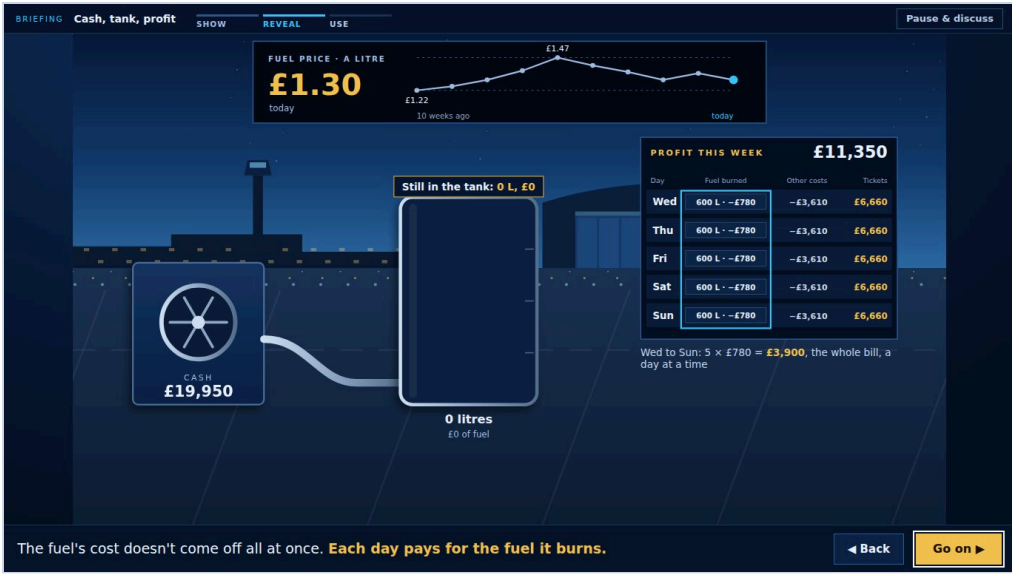

Screen 1 Every plane needs fuel to fly. Its price goes up and down, like petrol at a garage. You can't stop that, but when the price is good you can buy extra and keep it in your tank.

Screen 2 You buy 3,000 litres at £1.30 a litre. £3,900 leaves the bank and the fuel waits in your tank. Nothing has flown yet, so profit is still £0.

Screen 3 Each day your planes burn 600 litres. That day's fuel, £780, comes off that day's profit.

Screen 4 The fuel's cost doesn't come off all at once. Each day pays for the fuel it burns.

End The fuel's cost doesn't come off all at once. Each day pays for the fuel it burns.

In the game: Thursday of week 1, with Red Kite's undercut card · 4 screens

BERTIE'S NOTES, AS WRITTEN

II feel like on this one it asked me a question but I wasn't able to answer it so just check that please.

WHAT BERTIE IS ASKING FOR

Bertie felt something asked a question he couldn't answer. The briefing's own three screens ask nothing; the Red Kite card it returns to asks for the "stay with you" sum. Worth checking which it was, and making sure the pupil always has a way to answer.

THE WORDS ON SCREEN, IN ORDER

1. Red Kite Air is selling Dublin at £50. You charge £110: £60 dearer.
2. For every £10 dearer, 1 in 10 walk. £60 dearer → 6 in 10 → 18 of 30.
3. 12 stay with you: 4 in every 10. That's the "stay with you" figure on the Red Kite card.

Screen 1 Red Kite Air is selling Dublin at £50. You charge £110: £60 dearer.

Screen 2 For every £10 dearer, 1 in 10 walk. £60 dearer → 6 in 10 → 18 of 30.

Screen 3 12 stay with you: 4 in every 10. That's the "stay with you" figure on the Red Kite card.

End 12 stay with you: 4 in every 10. That's the "stay with you" figure on the Red Kite card.

BRIEFING 4 OF 12

More demand than seats

In the game: The week-1 review · 4 screens

BERTIE'S NOTES, AS WRITTEN

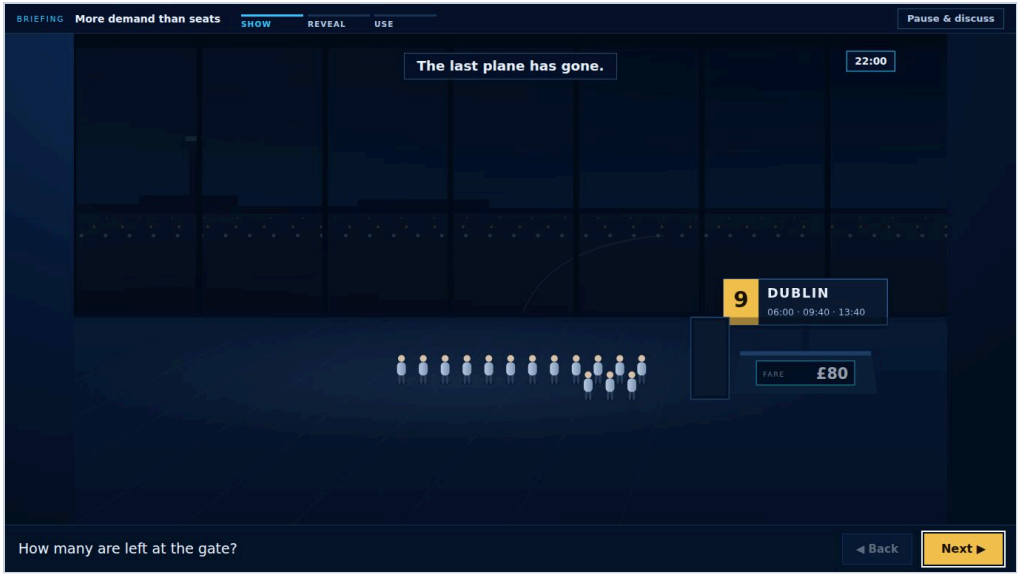

I didn't really understand this briefing at all. But I think its probably more useful to attach it to the fair. Briefing, but not in its current form. It should just touch on the. You will make be making decisions about whether to buy a bigger plane. But you need to make sure you're nearly filling the plane. There's no point buying a huge plane if there isn't the demand. So I think that should be tacked on the end of the fair one. I think we need to word that better. But I think maybe on the fair one, maybe it's even at the beginning, it's about demand. No, not the beginning for this bit. No, because the fares is about the maths really. But this could be a good intro and it's about explaining that. Erm yet you'll have to make decisions about. Whether a bigger plane is worth it at various times, eventually it will be worth it, but until it till you've got enough demand, the cost might outweigh the profit. So with this feedback I need you to put make it detailed. Don't cut things out, but I need it to go to claw design I think. I think we need this whole thing to go to Claude Design.

WHAT BERTIE IS ASKING FOR

Bertie didn't follow this briefing as it is. The idea to keep, reworded and fitted to the end of What a fare does (not the start, which is about the maths): you will have to decide, at different times, whether a bigger plane is worth it. Eventually it will be. But until you have enough demand to nearly fill it, its extra cost can outweigh the extra profit, so there is no point buying a huge plane if the people aren't there. Bertie wants this whole set of briefings to go to Claude Design.

THE WORDS ON SCREEN, IN ORDER

1. How many are left at the gate?
2. People you can't carry don't pay. Another plane, a bigger one, or a higher fare.
3. 3 flights × 19 seats = 57. 72 wanted to fly.

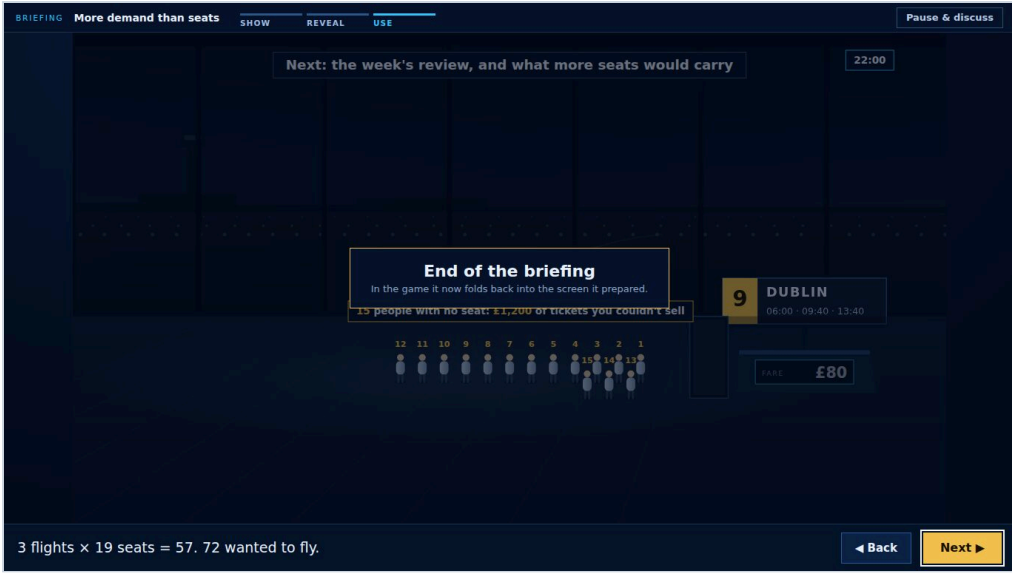

Screen 1 How many are left at the gate?

Screen 2 People you can't carry don't pay. Another plane, a bigger one, or a higher fare.

Screen 3 3 flights × 19 seats = 57. 72 wanted to fly.

End 3 flights × 19 seats = 57. 72 wanted to fly.

Can you afford to run it?

In the game: Week 2, the Fuel desk, straight after Cash, tank, profit · 14 screens

BERTIE'S NOTES, AS WRITTEN

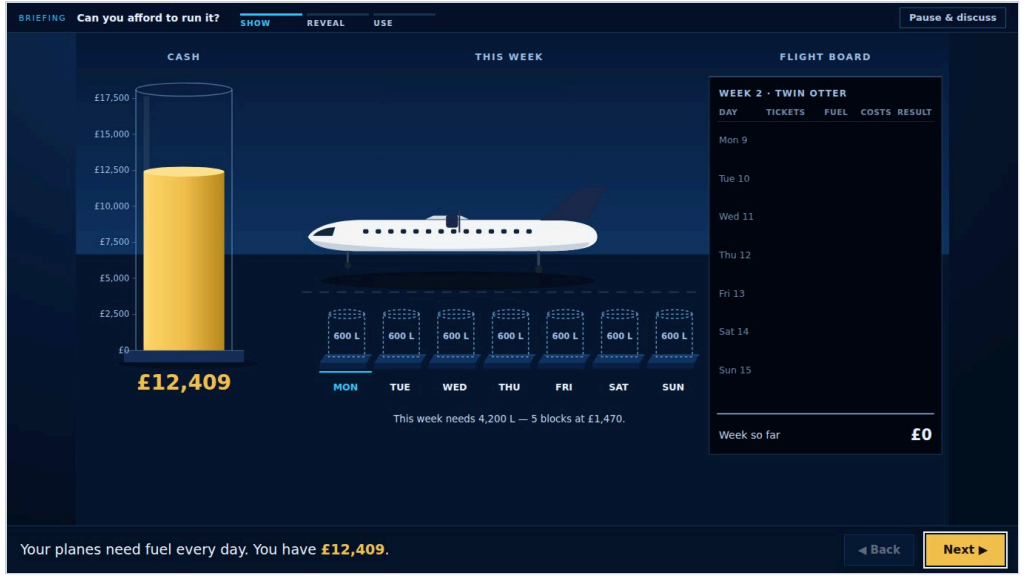

This one confused me because when I had a choice, I wasn't really sure what the choice was. Also, the money looks very like liquid, so I think that's confusing.

WHAT BERTIE IS ASKING FOR

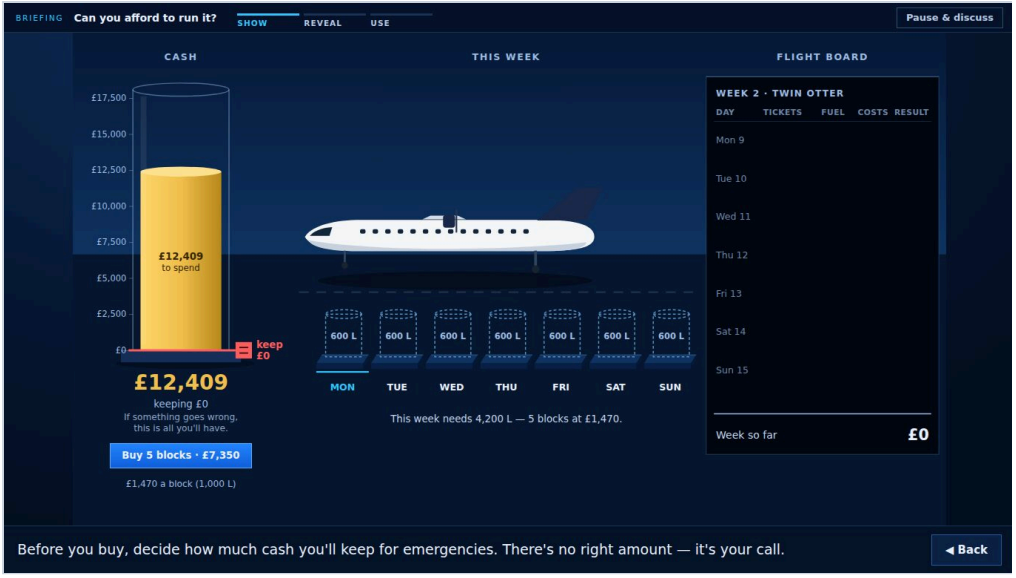

The choice in the middle (how much cash to keep for emergencies) wasn't clear: it needs to say plainly what is being chosen. The cash column looks like liquid, which confuses it with fuel.

THE WORDS ON SCREEN, IN ORDER

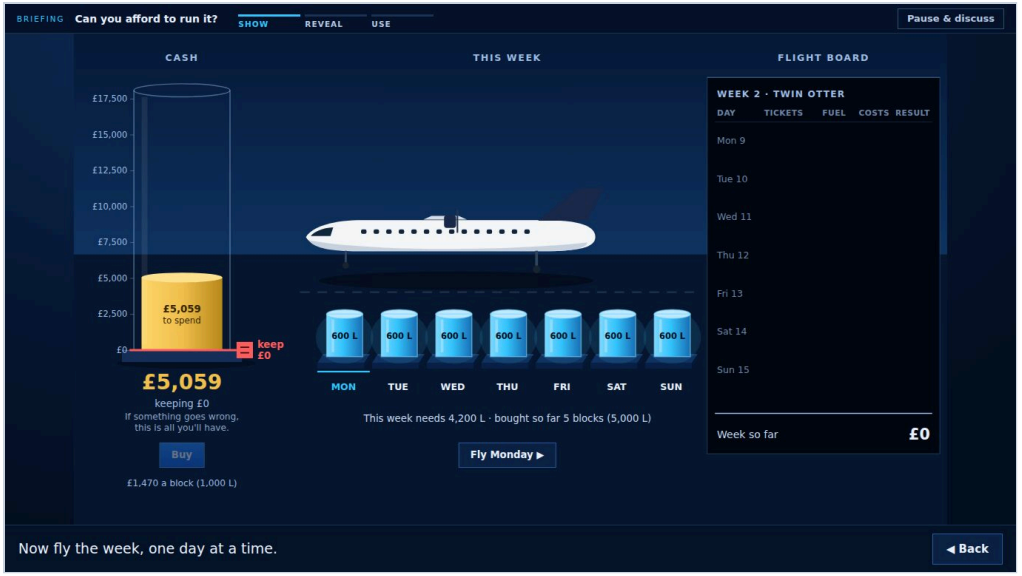

1. Your planes need fuel every day. You have £12,409.
2. Before you buy, decide how much cash you'll keep for emergencies. There's no right amount — it's your call. *(A choice to make)*
3. Now fly the week, one day at a time. *(A choice to make)*
4. You don't need the whole week's fuel on Monday. Buy what you can, fly, and buy the rest with the tickets.
5. Back to Monday. *(A choice to make)*
6. Before buying a plane, ask: can I still afford to run the planes I'll have?
7. Your aim this year. This card stays on Home until January.

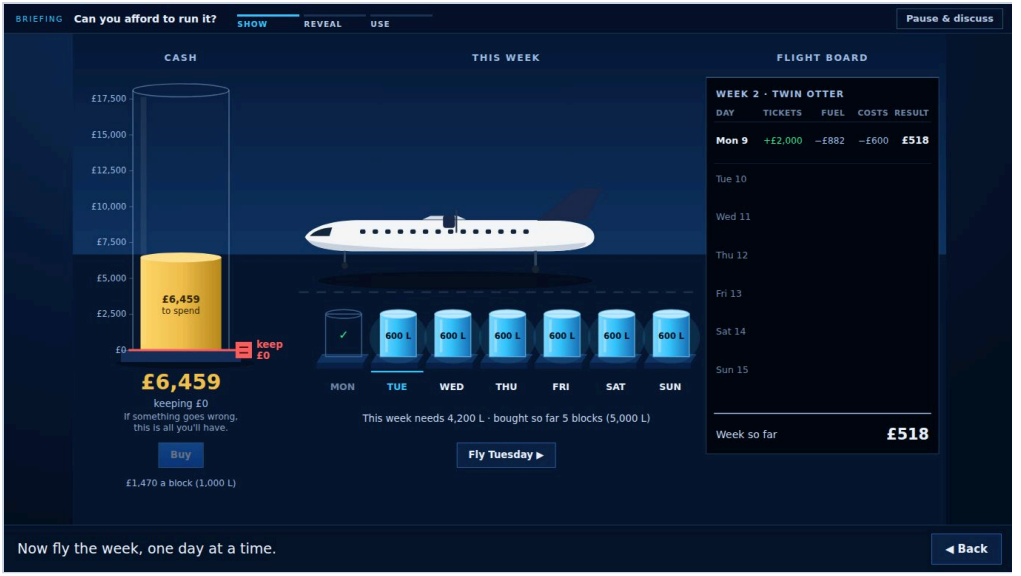

Screen 1 Your planes need fuel every day. You have £12,409.

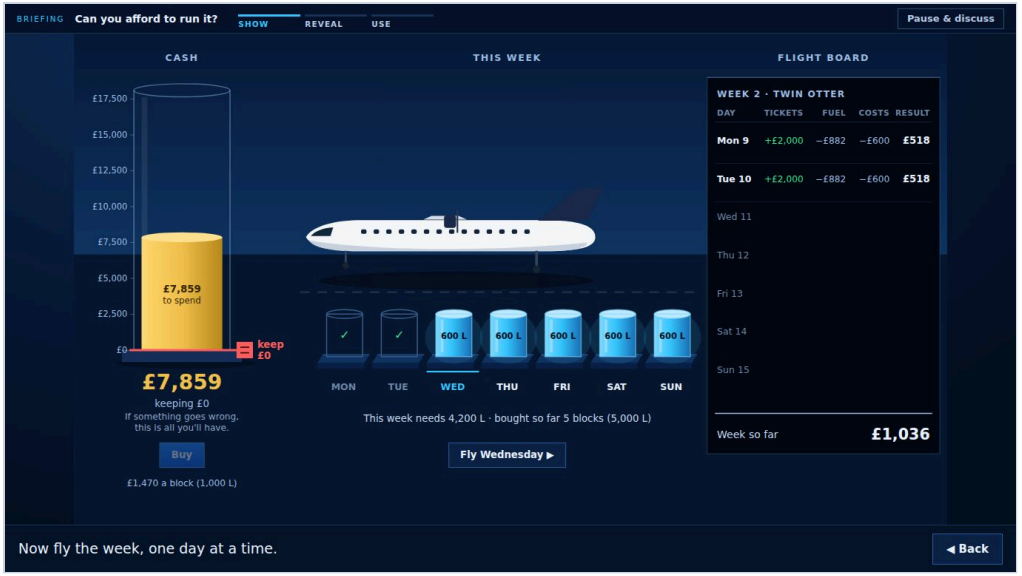

Screen 2 Before you buy, decide how much cash you'll keep for emergencies. There's no right amount — it's your call.
